Title

METHODS FOR PRODUCING ANTIBODIES

Commissioner for Patents

P.O. Box 1450

Alexandria, VA 22313-1450

REQUEST FOR CORRECTED OFFICIAL FILING RECEIPT

Please correct the title shown on the Filing Receipt for the above-referenced application to read: "METHODS FOR PRODUCING ANTIBODIES". This is the title as amended in the Preliminary Amendment (copy enclosed) filed with the application on June 8, 2005. A copy of the original Filing Receipt showing the desired changes in red ink is attached for your convenience. Please supply a corrected Filing Receipt to the undersigned.

No fee is believed to be due. If, however, there are any charges or credits, apply them to Deposit Account No. 06-1050.

Respectfully submitted,

Fish & Richardson P.C.

225 Franklin Street Boston, MA 02110

LICENSE FOR FOREIGN FILING UNDER Title 35, United States Code, Section 184 Title 37, Code of Federal Regulations, 5.11 & 5.15

GRANTED

The applicant has been granted a license under 35 U.S.C. 184, if the phrase "IF REQUIRED, FOREIGN FILING LICENSE GRANTED" followed by a date appears on this form. Such licenses are issued in all applications where the conditions for issuance of a license have been met, regardless of whether or not a license may be required as set forth in 37 CFR 5.15. The scope and limitations of this license are set forth in 37 CFR 5.15(a) unless an earlier license has been issued under 37 CFR 5.15(b). The license is subject to revocation upon written notification. The date indicated is the effective date of the license, unless an earlier license of similar scope has been granted under 37 CFR 5.13 or 5.14.

This license is to be retained by the licensee and may be used at any time on or after the effective date thereof unless it is revoked. This license is automatically transferred to any related applications(s) filed under 37 CFR 1.53(d). This license is not retroactive.

The grant of a license does not in any way lessen the responsibility of a licensee for the security of the subject matter as imposed by any Government contract or the provisions of existing laws relating to espionage and the national security or the export of technical data. Licensees should apprise themselves of current regulations especially with respect to certain countries, of other agencies, particularly the Office of Defense Trade Controls, Department of State (with respect to Arms, Munitions and Implements of War (22 CFR 121-128)); the Office of Export Administration, Department of Commerce (15 CFR 370.10 (j)); the Office of Foreign Assets Control, Department of Treasury (31 CFR Parts 500+) and the Department of Energy.

NOT GRANTED

No license under 35 U.S.C. 184 has been granted at this time, if the phrase "IF REQUIRED, FOREIGN FILING LICENSE GRANTED" DOES NOT appear on this form. Applicant may still petition for a license under 37 CFR 5.12, if a license is desired before the expiration of 6 months from the filing date of the application. If 6 months has lapsed from the filing date of this application and the licensee has not received any indication of a secrecy order under 35 U.S.C. 181, the licensee may foreign file the application pursuant to 37 CFR 5.15(b).

PRELIMINARY AMENDMENT

Prior to examination, please amend the application as indicated on the following pages (a total of 11, including this page).

Amendments to the Specification appear at pages 2-6.

Amendments to the Claims appear at pages 7-9.

Amendment to the Drawings appear at page 10.

Remarks appear at page 11.

Express N	Aail Label	No.	EV 41	182404	9US

Applicant: Kodama et al.

Serial No.: Unassigned Filed: Herewith Page: 2 of 11

Attorney's Docket No.: 14875-137US1 / C1-A0210Y1P-US

Amendments to the Specification:

Please replace the original paper copy of the Sequence Listing with the substitute paper copy of the Sequence Listing filed herewith.

At page 1, line 1, please delete subheading:

DESCRIPTION

Please amend the title to read as:

METHODS FOR PRODUCING ANTIBODIES

Insert the following paragraph on page 1, line 3, after the title:

Claim of Priority

This application is the National Stage of International Application No. PCT/JP03/07071, filed June 4, 2003, which claims the benefit of Japanese Patent Application Serial Nos. 2002-164834, filed on June 5, 2002, and 2002-180351, filed on June 20, 2002, the entire contents of which are hereby incorporated by reference.

Please replace the paragraph beginning at page 7, line 25, with the following amended paragraph:

Of these methods, transgenic non-human animals which preserve a gene encoding an immunotolerance antigen in an expressible state are preferred as the non-human animals comprising immunotolerance of the present invention. The transgenic animals comprise in their body an immunotolerance antigen that was originally an exogenous protein prior to the maturation of immune functions. Therefore, it is highly possible that the immune functions of the transgenic animals recognize the immunotolerance antigen as being completely endogenous. Thus, the use of such transgenic non-human animals is advantageous in inducing immunotolerance in the present invention. The transgenic animals, into which immunotolerance

Attorney's Docket No.: 14875-137US1 / C1-A0210Y1P-US

antigens are introduced, produce few antibodies to immunotolerance antigens, as shown in Example[[s]] 8.

Please replace the paragraph beginning at page 17, line 6, with the following amended paragraph:

More specifically, transgenic mice can be prepared, for example, by the method in Example[[s]] 2.

Please replace the paragraph beginning at page 24, line 7, with the following amended paragraph:

Fig. 3 shows the structure of the pCAG-gp64 vector constructed in Example[[s]] 1.

Please replace the paragraph beginning at page 25, line 6 with the following amended paragraph:

The PCR reaction solution composition was 5 μl of x10 ExTaq buffer, 4 μl of dNTP supplied with ExTaq, 1 μl of 10 μmol/l 64F1 primer, 1μl of 10 μmol/l 64R1 primer, 1μl of 500 pg/μl pBac-N-blue, 0.5 μl of 5 units/μl ExTaq, and 37.5 μl of deionized water (DIW). PCR was carried out for:

5 minutes at 94°C;

25 cycles of "15 seconds at 94°C, 30 seconds at 57°C, and 30 seconds at 72°C"; 7 minutes at 72°C; and 4°C forever.

Please replace the paragraph beginning at page 25, line 15, with the following amended paragraph:

The amplified band was subcloned into pGEM-Teasy, and then transformed *E. coli* DH5α cells. After performing colony PCR using T7 and SP6 primers, the nucleotide sequence of clones confirmed to comprise the insert was analyzed with the ABI Prism377 DNA sequencer

Applicant: Kodama et al.
Serial No.: Unassigned
Filed: Herewith

Page : 4 of 11

Attorney's Docket No.: 14875-137US1 / C1-A0210Y1P-US

and the BigDye Cycle Sequence kit ABI Prism® 377 DNA sequencer (Applied Biosystems) and the BigDye® Terminator Cycle Sequencing kit (Applied Biosystems), in combination with the T7 primer or the SP6 primer. As a result, clones comprising the subject gene were confirmed. A fragment comprising the gp64 gene and confirmed to comprise no mutations in its nucleotide sequence was isolated from the clones by EcoRI digestion, and then inserted into an EcoRI-digested pCAGGS1. The resulting vector was used to transform *E. coli* DH5α cells. Cells comprising the clone as designed were incubated in 250 ml of LB medium at 37°C overnight, and purified by using the Endofree MAXI kit (QIAGEN) to obtain 581.6 μg of plasmid.

Please replace the paragraph beginning at page 25, line 36, with the following amended paragraph:

The mouse pronuclear eggs to be injected with the DNA fragment were collected as follows: Specifically, BALB/c series female mice (Nippon CLEA) were induced to superovulate by intraperitoneal administration of 5 international units (i.u) of pregnant mare serum gonadotrophin (PMSG), followed by intraperitoneal administration of 5 i.u of human chorionic gonadotrophin (hCG) 48 hours later. These female mice were mated with male mice of the same lineage. The morning after mating, the oviducts of female mice that were confirmed to have a vaginal plug were perfused to recover pronuclear eggs.

Please replace the paragraph beginning at page 26, line 8, with the following amended paragraph:

The DNA fragments were injected into the pronuclear eggs with a micromanipulator (Experimental Medicine (Jikken Igaku) suppl., [[(]] The latest technologies in gene targeting (gene targeting no saishin gijyutu) (Yodosha), 190-207, 2000). The DNA fragments were injected into 373 embryos of BALB/c mice. On the next day, 216 embryos that had developed to the two-cell stage were transplanted into the oviducts of recipient female mice, which were in the first day of pseudopregnancy, at a density of around ten embryos per oviduct (i.e. around 20 embryos per mouse).

signed

Attorney's Docket No.: 14875-137US1 / C1-A0210Y1P-US

with 1,000 fold-diluted serum samples, sequentially washed, and then reacted with a 1,000 fold-diluted Biotin-Anti-Mouse $IgG(\gamma)$ (Zymed) and Streptavidin-Alkaline Phosphatase (Zymed). An alkaline phosphatase staining kit (Nakarai <u>Tesque</u>) was used for staining. A positive control antibody for detecting gp64 was purchased from NOVAGEN.

Please replace the paragraph beginning at page 31, line 21, with the following amended paragraph (note that the only change is to correct the numbering of the example):

[Example [[8]] 9] Production of anti-PepT1 antibodies by gp64 Tgm

Please replace the paragraph beginning at page 32, line 16, with the following amended paragraph:

For example, an exogenous gene expression system, known as the baculovirus expression system, is useful as a tool for obtaining recombinant proteins easily and in large quantities. In particular, when applied to membrane proteins, the baculovirus expression system is excellent in that the membrane proteins are obtainable with other viral envelope proteins in a state that maintains their structure. However, this expression system is also problematic in that, when using this expression product as the immunogen, gp64 acts as a background protein antigen and interferes with the acquisition of antibodies against a target protein antigen.

Applicant: Kodama et al. Serial No.: Unassigned Filed

Attorney's Docket No.: 14875-137US1 / C1-A0210Y1P-US

Amendments to the Claims:

This listing of claims replaces all prior versions and listings of claims in the application:

Listing of Claims:

- 1. (Original) A method for producing an antibody that recognizes a target antigen, wherein the method comprises the steps of:
- i) immunizing a non-human animal that has immunotolerance to a background antigen comprised in an immunogen, wherein the immunogen comprises both the target antigen and the background antigen; and
 - ii) obtaining an antibody against the target antigen, or a gene encoding the antibody.
 - 2. (Original) The method of claim 1, wherein immunotolerance is induced artificially.
- 3. (Original) The method of claim 1, wherein the non-human animal is a transgenic nonhuman animal.
- 4. (Original) A method for producing an antibody against a target antigen, wherein the method comprises the steps of:
 - (a) preparing an immunogen comprising the target antigen and a background antigen;
- (b) producing a transgenic non-human animal comprising a gene expressibly encoding the background antigen;
 - (c) administering the immunogen of (a) to the transgenic non-human animal of (b); and
- (d) isolating the antibody against the target antigen from the transgenic non-human animal.

- 5. (Original) The method of claim 4, wherein the immunogen is a virus particle or a part thereof.
 - 6. (Original) The method of claim 5, wherein the virus is a baculovirus.
 - 7. (Original) The method of claim 4, wherein the target antigen is a membrane protein.
 - 8. (Original) The method of claim 6, wherein the background antigen is gp64.
 - 9. (Original) The method of claim 4, wherein the non-human animal is a mouse.
- 10. (Currently Amended) An antibody that is produced by the method of any one of claims 1 to 9 claim 1.
- 11. (Original) A chimeric antibody between a non-human animal and human, or a humanized antibody, produced using the antibody of claim 10.
- 12. (Original) A transgenic non-human animal, into which a gene encoding a viral envelope protein is introduced.
- 13. (Original) The transgenic non-human animal of claim 12, wherein the virus is a baculovirus.
- 14. (Original) The non-human animal of claim 13, wherein the viral envelope protein is gp64.
- 15. (Original) The non-human animal of claim 12, wherein the non-human animal is a mouse.

16. (Original) The non-human animal of claim 12, for use in producing an antibody against an antigen comprising a viral protein.

- 17. (Original) A method for producing a non-human immunized animal, wherein the method comprises the step of producing a transgenic non-human animal into which a gene encoding a background antigen is introduced.
- 18. (Original) A non-human immunized animal for obtaining an antibody against a target antigen comprising a background antigen, wherein the animal is produced by the method of claim 17.
- 19. (Original) A method for producing an antibody against PepT1, wherein the method comprises the steps of:
- (a) preparing a baculovirus that expressibly comprises a DNA which encodes PepT1 or a fragment thereof;
- (b) infecting a host cell with the baculovirus of (a) to obtain a budding virus that expresses PepT1 or a fragment thereof;
- (c) producing a transgenic non-human animal that expressibly comprises a gene encoding a baculovirus membrane protein gp64;
- (d) immunizing the transgenic non-human animal of (c) with a fraction comprising the Copy budding virus of (b) or PepT1 or its fragment; and
 - (e) recovering the antibody-recognizing PepT1 from the immunized animal.
 - 20. (New) An antibody that is produced by the method of claim 4.

REMARKS

The amendments to the specification clarify the translated text, correct errors, and, identify abbreviations and trademark information in the original Japanese specification, all of which are apparent when read in the context of the entire specification. The amendments also correct the title and insert into the specification a paper copy of the sequence listing in which the general information has been updated to reflect accurate information for the instant application. In addition Fig. 1 is amended to move the line denoting the EcoR1 restriction enzyme recognition site from after the "t" to after a "c."

Claims 1-20 are pending. Claim 10 is amended to remove multiple dependency. New claim 20 is based on original claim 10. Applicants ask that all claims be examined in view of the amendment to the claims. No new matter has been introduced by these amendments.

Please apply any other charges to deposit account 06-1050, referencing Attorney-Docket No. 14875-137US1.
